

POWER TOOL WITH INTEGRATED TAPE MEASURE

ABSTRACT OF THE DISCLOSURE

A power tool has a housing with a motor and power source coupled within the housing. An output is coupled with the motor and is adapted to be coupled with a tool. An activation member is electrically coupled with the motor and the power source to drive the output. A measuring device is positioned in the housing. The measuring device may be used while positioned in the housing. The measuring device may also be removed from the housing and used outside of it.
